

A-LUA-ROUGELIKE

WINDOWS BETA

Official Beta Testing & Combat Operations Guide

Welcome to the Windows Beta! **A-Lua-Rougelike** is a terminal-style strategy-combat roguelike powered by the LÖVE 2D engine. This document contains key instructions, controls, elemental advantages, and Windows specifics to help you survive your climb.

1. Game Controls & Navigation

The game is completely menu-driven for fast tactical gameplay:

Context	Input / Keys	Action
Menu Navigation	1 – 3	Select menu option
Go Back / Cancel	0 or ESC	Return to previous menu
Combat Actions	1 – 5	Choose Action (Attack, Defend, Spells, Potions, Flee)
New Save Setup	Alphanumeric (A-Z , 0-9) + ENTER	Input character name (Max 10 chars)

2. Combat Mechanics & Elemental Chart

You have access to physical attacks and elemental spells. Matching elements against enemy weaknesses is critical to surviving higher waves.

Earth → Thunder → Fire → Ice → Grass → Earth

- Super-effective Spells:** Deal **x2 Damage** when exploiting the elemental weakness.
- Resisted Spells:** Deal **0 Damage** against immune or resistant elements.

Key Milestones & Bosses

- Elites (Every 5th Wave):** Boosted stats and aggressive attack patterns.
- Rulers (Every 20th Wave):** Boss slimes with unique elemental immunities. Adapt your strategy!
- The Slime Master (Wave 100):** The ultimate challenge. Stack physical stats and armor to survive this wall.

3. Progression & Charms

- Charms System:** Charms are the core of meta-progression. Completing runs with specific charms unlocks higher-tier charms with game-breaking synergies.
- Death & Fleeing Penalty:** Caution! Fleeing from combat incurs the exact same penalty as dying: your current equipment is wiped, and your character is reset to Wave 1.

Campfire & Spellbook Tips

- Always equip your weapons and shields at the campfire before entering combat! Entering unprepared will lose your run.
- Only purchase spells you intend to use. The spellbook supports up to **9 active spells** at a time.

4. Windows Specifics & Troubleshooting

Running the App on Windows

To launch the game, extract the ZIP file and double-click `A-Lua-Rougelike.exe`.

CRITICAL: Do NOT move or delete any `.dll` files from the game folder. They are required for the game engine and audio to function!

Windows SmartScreen Warning ("Windows protected your PC"):

1. Click **More info** (*Más información*) on the pop-up window.
2. Click **Run anyway** (*Ejecutar de todas formas*).

Save File Directory:

Your save data is managed under AppData at:

```
%appdata%\LOVE\    (Press [Win + R] → type %appdata% → Enter)
```

Feedback & Bug Reporting:

Please record crash reports, wave numbers, and testing notes in `betatest_notes.txt`.
