

A-LUA-ROUGELIKE

MACOS BETA

Official Beta Testing & Combat Operations Guide

Welcome to the macOS Beta! **A-Lua-Rougelike** is a terminal-style strategy-combat roguelike powered by the LÖVE 2D engine. This document contains key instructions, controls, elemental advantages, and macOS specifics to help you survive your climb.

1. Game Controls & Navigation

The game is completely menu-driven for fast tactical gameplay:

Context	Input / Keys	Action
Menu Navigation	1 – 3	Select menu option
Go Back / Cancel	0 or ESC	Return to previous menu
Combat Actions	1 – 5	Choose Action (Attack, Defend, Spells, Potions, Flee)
New Save Setup	Alphanumeric (A-Z , 0-9) + ENTER	Input character name (Max 10 chars)

2. Combat Mechanics & Elemental Chart

You have access to physical attacks and elemental spells. Matching elements against enemy weaknesses is critical to surviving higher waves.

Earth → Thunder → Fire → Ice → Grass → Earth

- **Super-effective Spells:** Deal **x2 Damage** when exploiting the elemental weakness.
- **Resisted Spells:** Deal **0 Damage** against immune or resistant elements.

Key Milestones & Bosses

- **Elites (Every 5th Wave):** Boosted stats and aggressive attack patterns.
- **Rulers (Every 20th Wave):** Boss slimes with unique elemental immunities. Adapt your strategy!
- **The Slime Master (Wave 100):** The ultimate challenge. Stack physical stats and armor to survive this wall.

3. Progression & Charms

- **Charms System:** Charms are the core of meta-progression. Completing runs with specific charms unlocks higher-tier charms with game-breaking synergies.
- **Death & Fleeing Penalty:** Caution! Fleeing from combat incurs the exact same penalty as dying: your current equipment is wiped, and your character is reset to Wave 1.

Campfire & Spellbook Tips

- Always equip your weapons and shields at the campfire before entering combat! Entering unprepared will lose your run.
- Only purchase spells you intend to use. The spellbook supports up to **9 active spells** at a time.

4. macOS Specifics & Troubleshooting

Running the App on macOS

To launch the game, open `A-Lua-Rougelike.app`.

Gatekeeper Warning ("Unidentified Developer"):

1. Right-click (or `Control` + Click) on `A-Lua-Rougelike.app` and select **Open**.
2. Click **Open** in the macOS confirmation prompt.
3. Alternatively, navigate to **System Settings > Privacy & Security**, scroll down, and click **Open Anyway**.

Save File Directory:

Your save data is safely managed natively under macOS at:

```
~/Library/Application Support/LOVE/
```

Feedback & Bug Reporting:

Please record crash reports, wave numbers, and testing notes in `betatest_notes.txt`.
